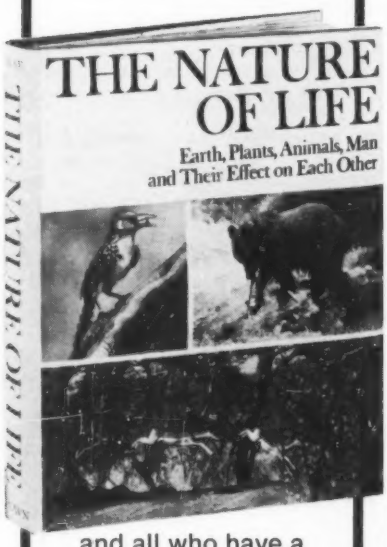
For nature lovers...



and all who have a reverence for life—wild and otherwise

Rarely, if ever, has any book provided such a panoramic view of the remarkable world in which we live — from the dim reaches of the distant past to the overwhelming realities of the present. For here is revealed the mosaic of earth in which *all* life is interrelated. It shows how life was formed, dispersed around the earth and developed into infinite variety and complexity. Here are the *patterns* of life — on continents and islands, on the ocean floor and the highest peaks, in temperate woodlands, arctic tundra, equatorial forests and arid deserts.

The Nature of Life will deepen everyone's understanding of the forces of nature and help us all in our efforts to halt the unnecessary pollution of our earth and the seas around it.

Over 200 large and beautiful photographs (82 in full color) taken in action and in the natural environment.

By LORUS and MARGERY MILNE authors of *Living Plants of the World, Water and Life, The Mating Instinct* and many others • $15 pre-Christmas; $17.50 thereafter. Now at your bookstore, or CROWN PUBLISHERS, 419 Park Ave. S., N. Y., N. Y. 10016.

the Lysenko affair
by David Joravsky

The hoax which fooled Stalin and Khrushchev, *Pravda* and the commissars of agriculture, along with a generation of scientists and farmers is now exposed in a book that proves it *is* possible to record Soviet history objectively. *The Lysenko Affair* ends years of mis-information, telling at last how one man created "thirty years of brutal irrationality in the campaign for scientific farming."
